

Improve your company's
bottom line and the environment

Commercial Energy Management Services

Energy savings of up to 30% are achievable with an aggressive energy management plan.

Energy savings of up to 5% are possible, with little or no capital investment, if you modify behaviors and operating procedures.

Energy management services

Our analysts have performed energy assessments on a wide variety of commercial facilities including municipal, recreational, small to medium industrial, office, institutional and apartment and condominium complexes. We offer a variety of assessment types that can be tailored to your specific requirements.

Using their expertise, analysts recommend changes for improving energy efficiency, reducing energy costs and realizing environmental benefits.

You will be provided with a benchmarking metric comparing your energy consumption to similar facilities. We also estimate the costs and associated savings of implementing energy efficiency changes – ranging from no to low cost behavioural changes to payback analysis for more substantial equipment upgrades.

Customized solutions

Your energy needs and the potential for energy savings will be exclusive to your operations. ATCO EnergySense provides customized solutions based on your goals, the specifics of your building and the needs of your occupants.

For example, we can show you the energy-saving potential of:

- adjusting or upgrading mechanical and electric systems
- modifying building envelopes, including windows and insulation
- changing operating procedures and behaviors
- leveraging available funding incentives

The bottom line

ATCO EnergySense experts can provide a comprehensive measure of your building's energy efficiency potential, along with concrete ways to implement changes, achieve savings and reduce greenhouse gas emissions.

You'll discover what energy upgrades make the most sense for your operations and which ones will provide sustained energy savings.

As you experience energy savings and improve the overall performance of your facility, you will also contribute to a cleaner environment. That's the bottom line of energy efficiency.

Ways to save energy

When it comes to energy, why pay for inefficiencies? Here are some things you can do that will make a difference in your monthly energy consumption.

- **Using motion sensors or digital timer switches to control lights** in infrequently used spaces will minimize your energy use in these areas.
- **Replacing an old boiler with a new, energy efficient model will reduce energy use up to 30%.**
- **Installing direct digital controls (DDC)** will optimize the energy efficiency of your building systems.

The starting point

Energy costs can account for a sizeable portion of your operating budget. Chances are, untapped opportunities for energy savings exist in your building.

Hidden savings in your building? Where do you go first?

Start with us. ATCO EnergySense has a solid reputation and track record as experts in energy management. We can help you make decisions on how to improve your bottom line by reducing your energy use, while contributing to a cleaner environment. Our services are not tied to any product, so you can be assured that the information you receive from our analysts will be objective, professional and unbiased.

Energy efficiency experts

As energy distribution companies, ATCO Gas and ATCO Electric safely deliver natural gas and electricity to Albertans every day. In keeping with our ongoing commitment to meeting the energy needs of our customers, ATCO Gas and ATCO Electric provide Albertans with a variety of energy management services through ATCO EnergySense.

ATCO EnergySense has staff with professional accreditation in Leadership in Energy and Environmental Design (LEED®) and Certified Energy Manager® (CEM®). Our experts have conducted energy assessments on over 600 commercial and industrial facilities.

Helping Albertans make wise energy choices
